QCD

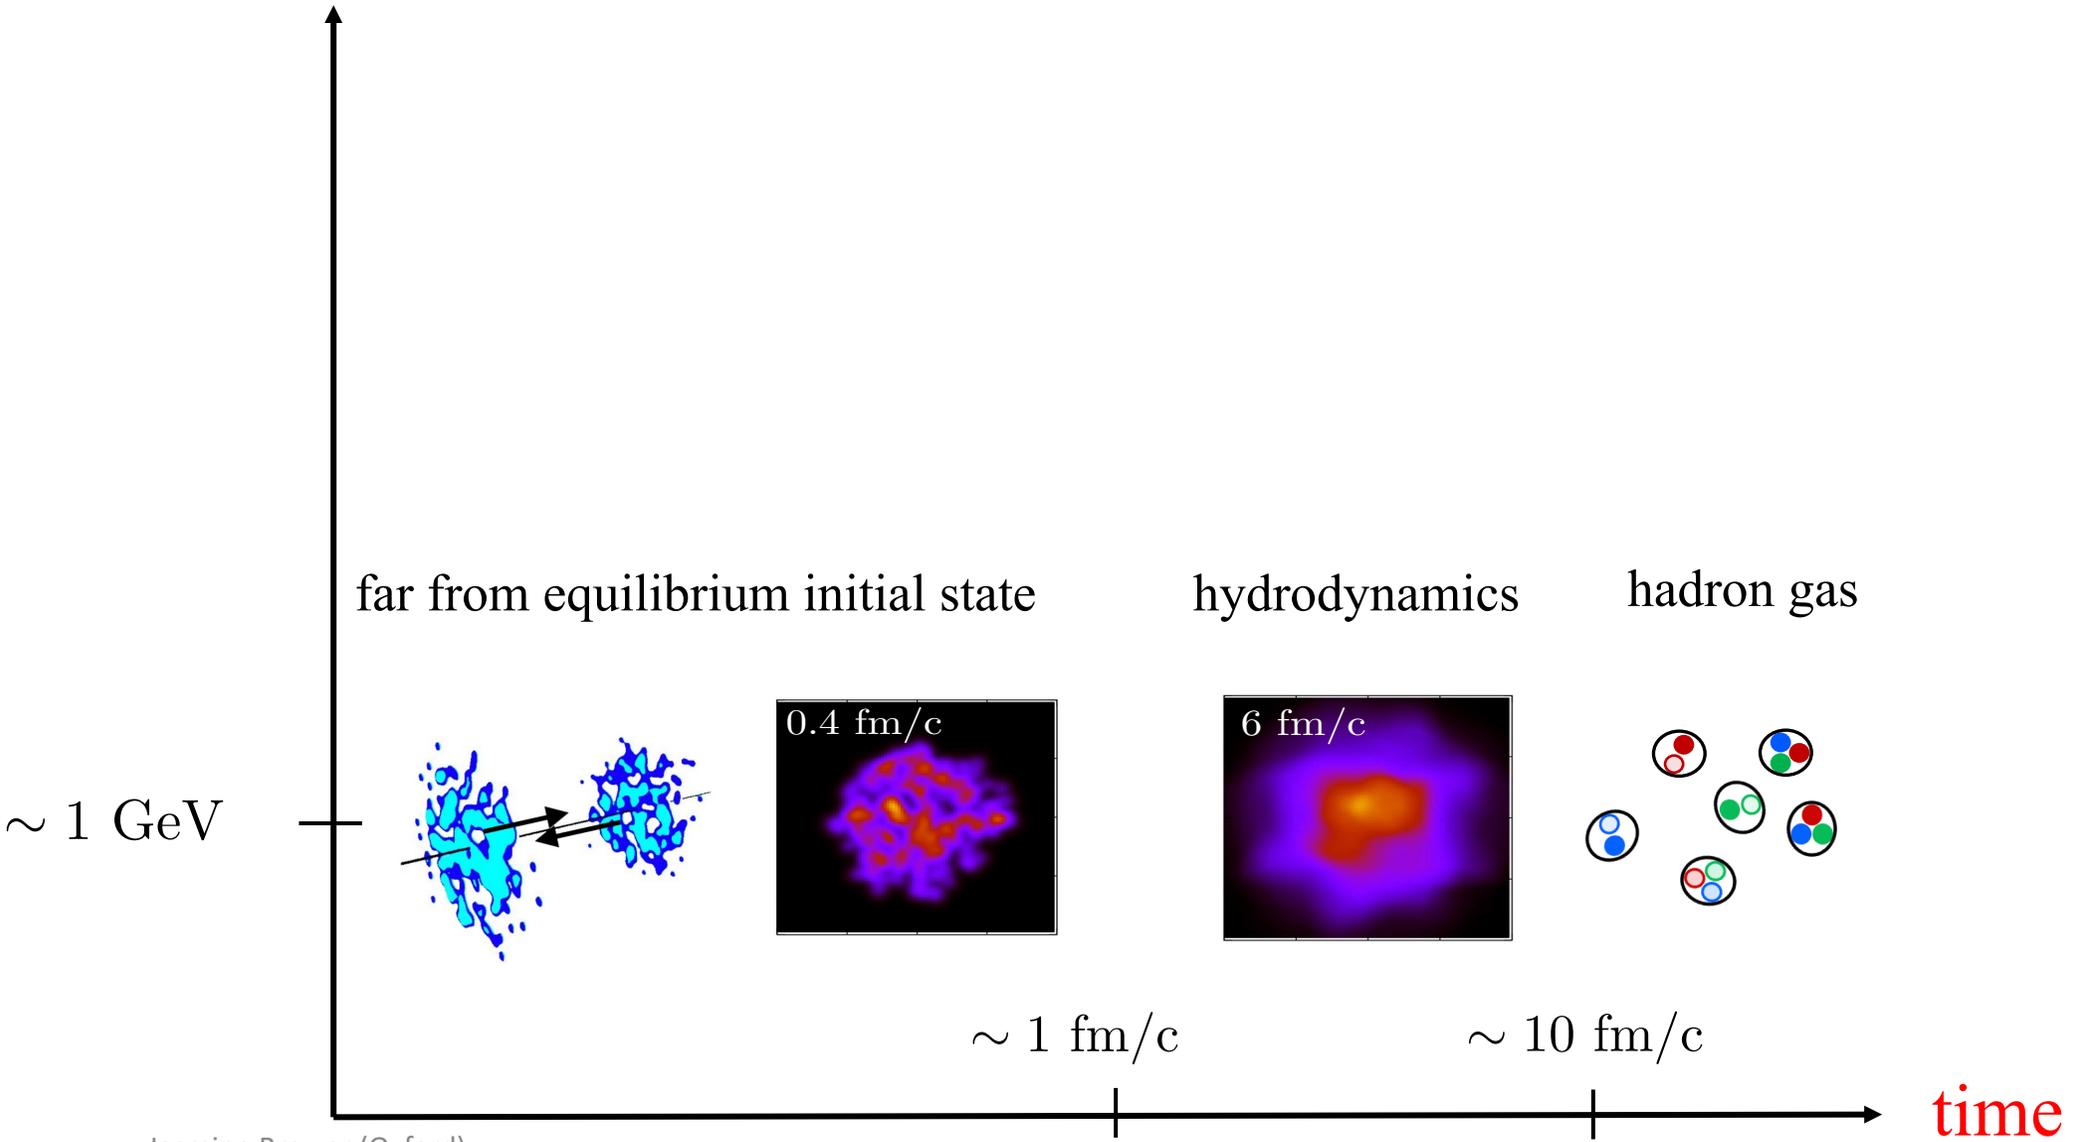

Understanding the fundamental interactions is just the beginning!

Heavy-ion collisions and quark-gluon plasma

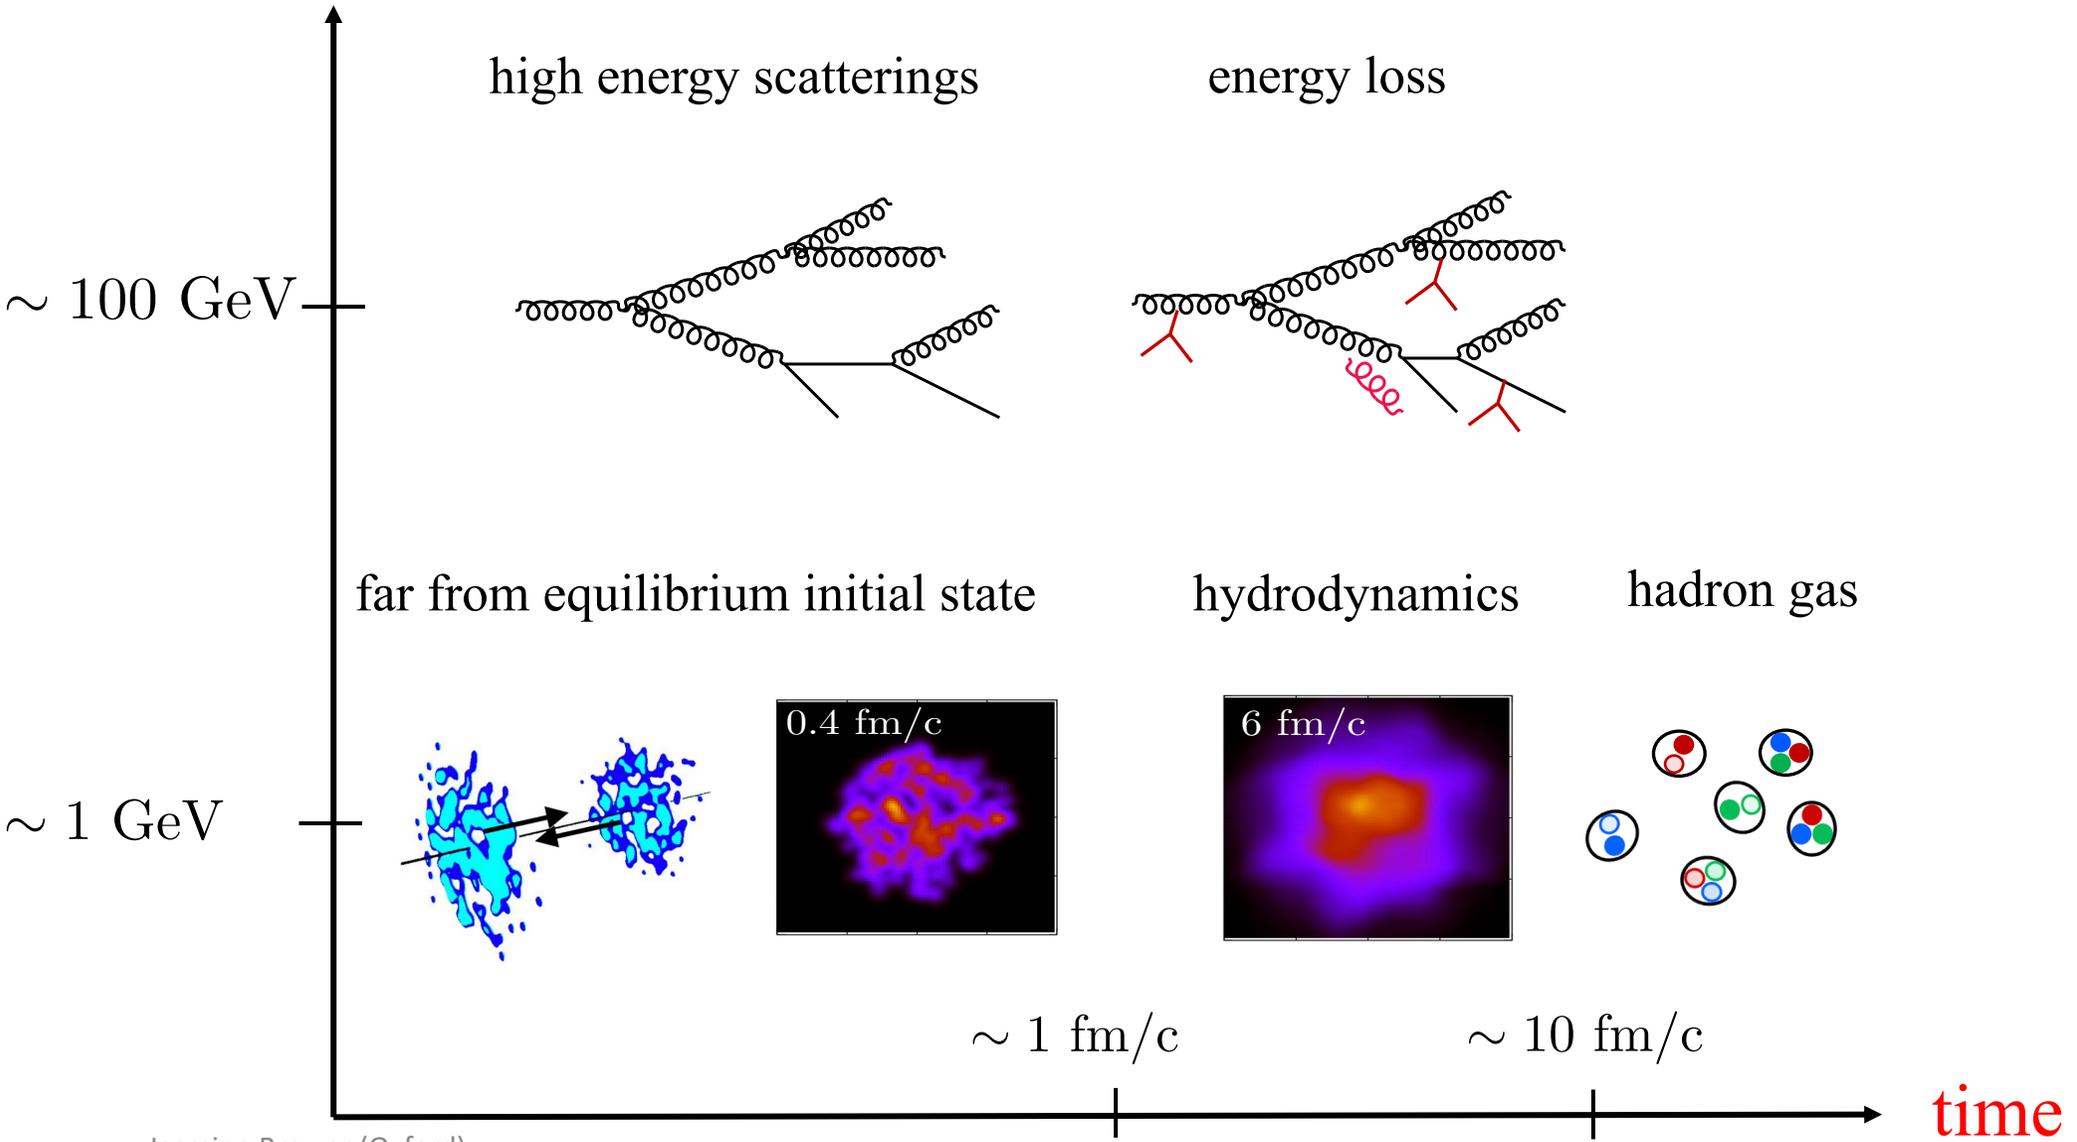

Heavy-ion collisions

energy

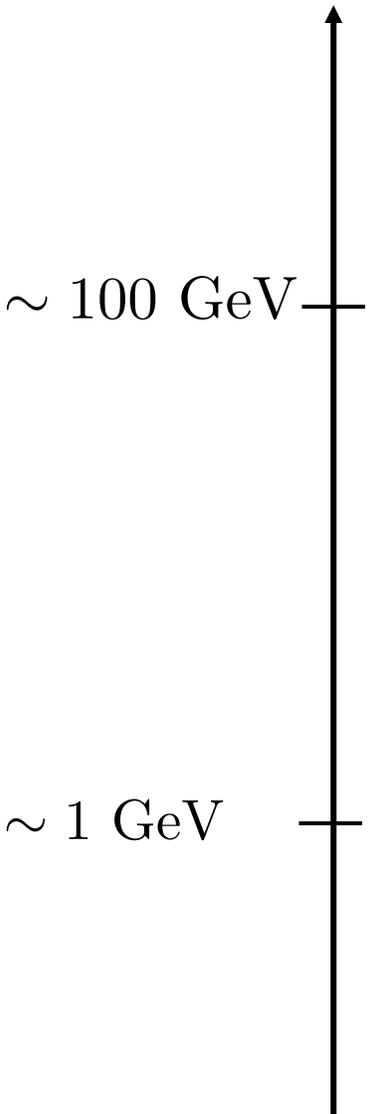

Heavy-ion collisions

energy

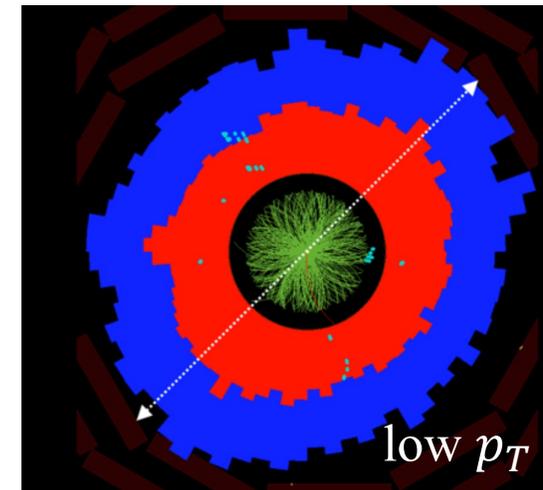

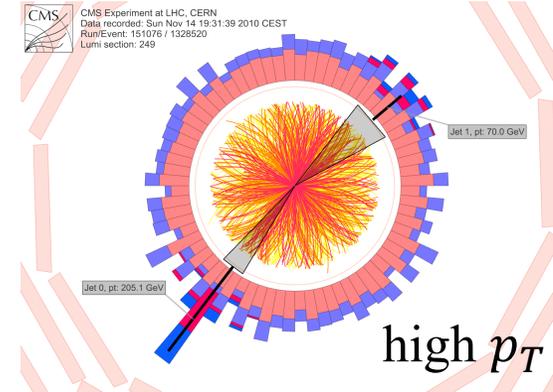

Studying the dense QCD medium

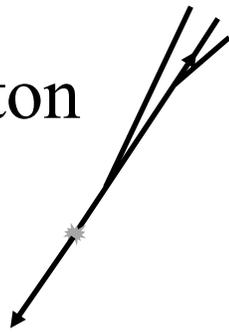

Modification of
high-energy probes
(hadrons, jets,
heavy flavor, ..)

Collective behavior
of low- p_T particles

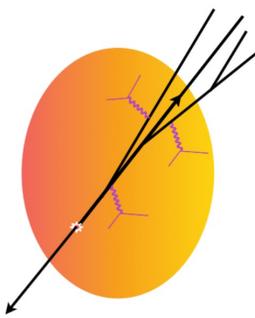

Modification of jets as a probe of quark-gluon plasma

proton–proton

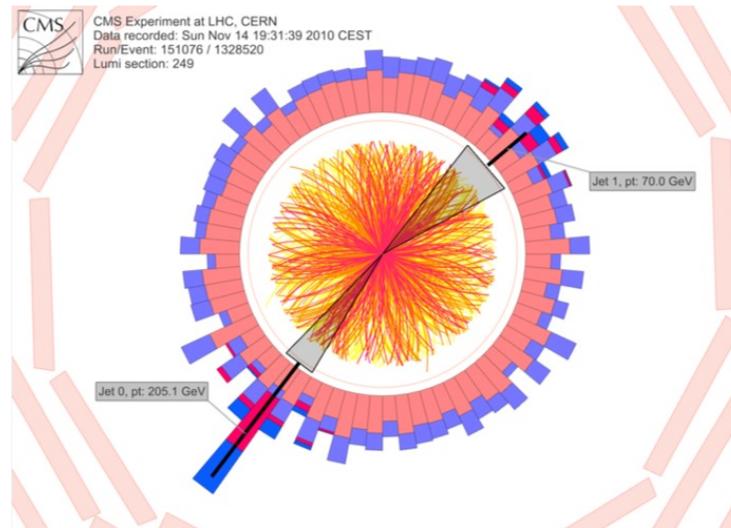

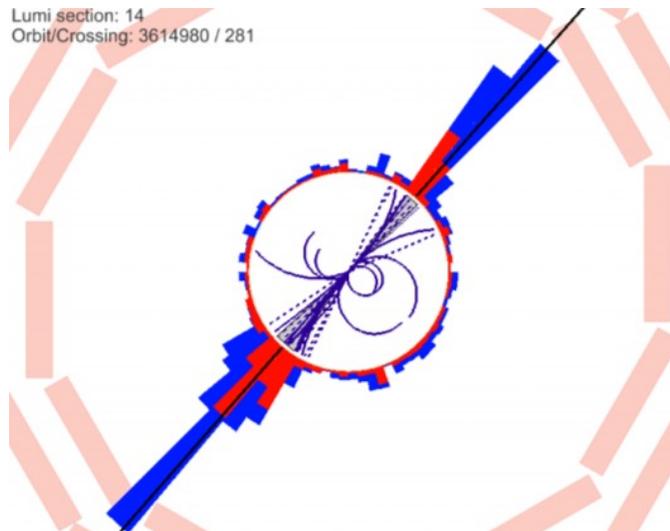

A diagram showing two black lines representing protons colliding at a central point. From the collision point, two black lines representing jets emerge at an angle.

heavy-ion

A diagram showing a yellow and orange oval representing a heavy-ion nucleus. Two black lines representing protons are shown colliding with the nucleus. From the collision point, two black lines representing jets emerge at an angle.

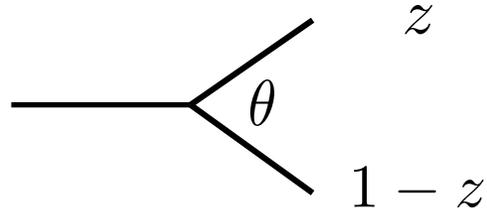

Large effect:

- Half as many jets per p_T in heavy-ion collisions
- Enhanced asymmetry of back-to-back jets
- ...

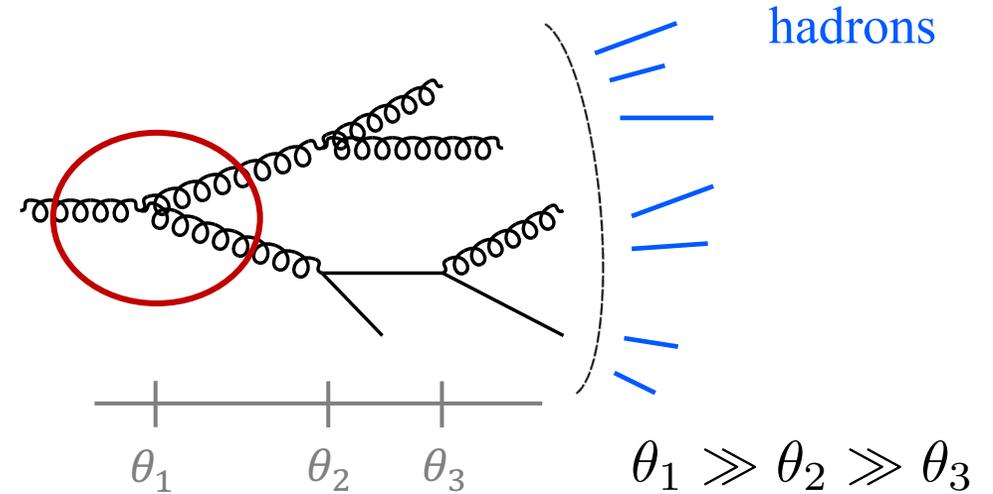

“baseline” jet properties

Parton splittings in vacuum

$$dP_{i \rightarrow jk} = \frac{d\theta}{\theta} dz P_{i \rightarrow jk}(z)$$

Splitting functions

Iteratively apply splitting functions, descending in angle, virtuality

Parton showers connect perturbative QCD to hadronic world

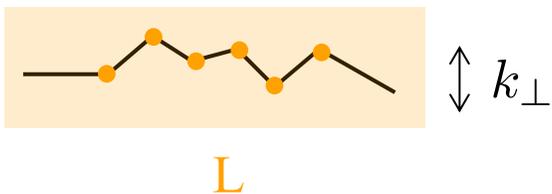

Going to higher accuracy

Parton showers

Next-to-leading log calculations
 \longleftrightarrow
 $\alpha_s \rightarrow 0$

A single high-energy parton in finite-temperature QCD

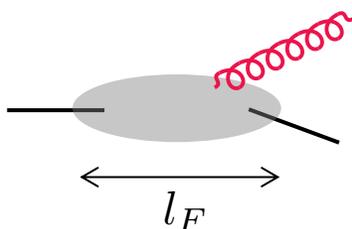

Parton undergoes transverse momentum diffusion

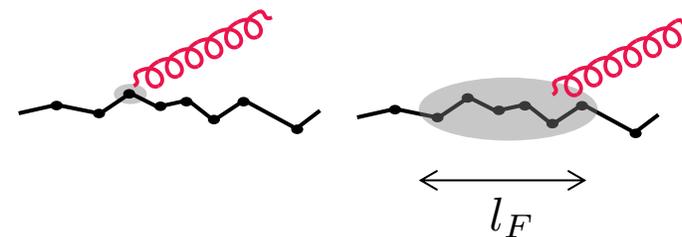

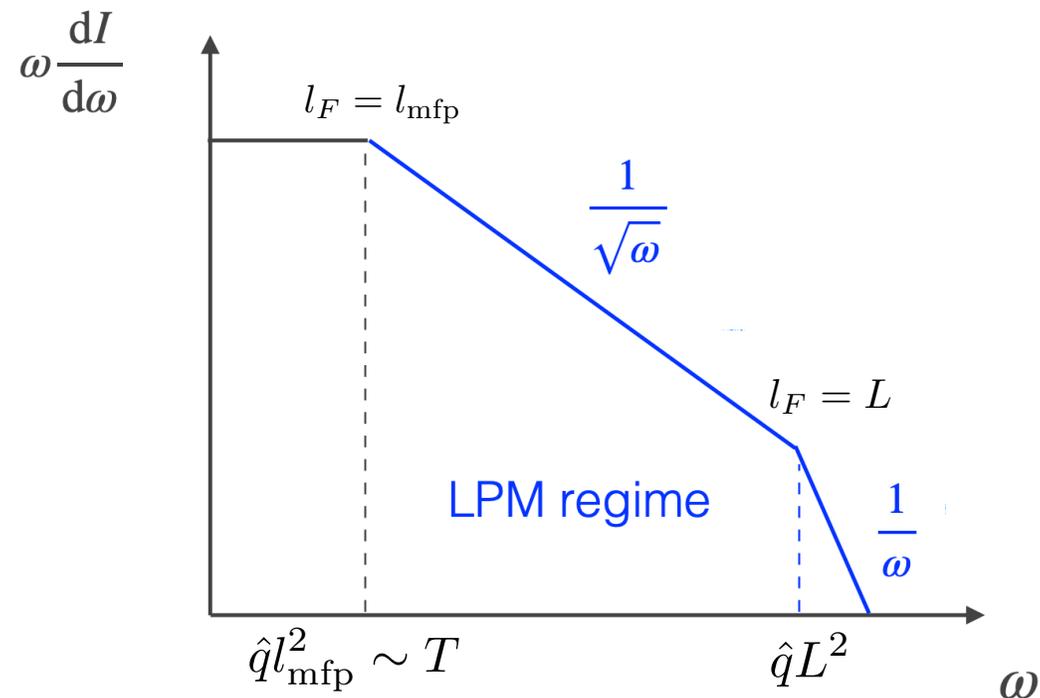

$$\hat{q} \equiv \frac{d\langle k_{\perp}^2 \rangle}{dt}$$

Kicks occasionally induce gluon radiation

Radiation can't be resolved instantaneously

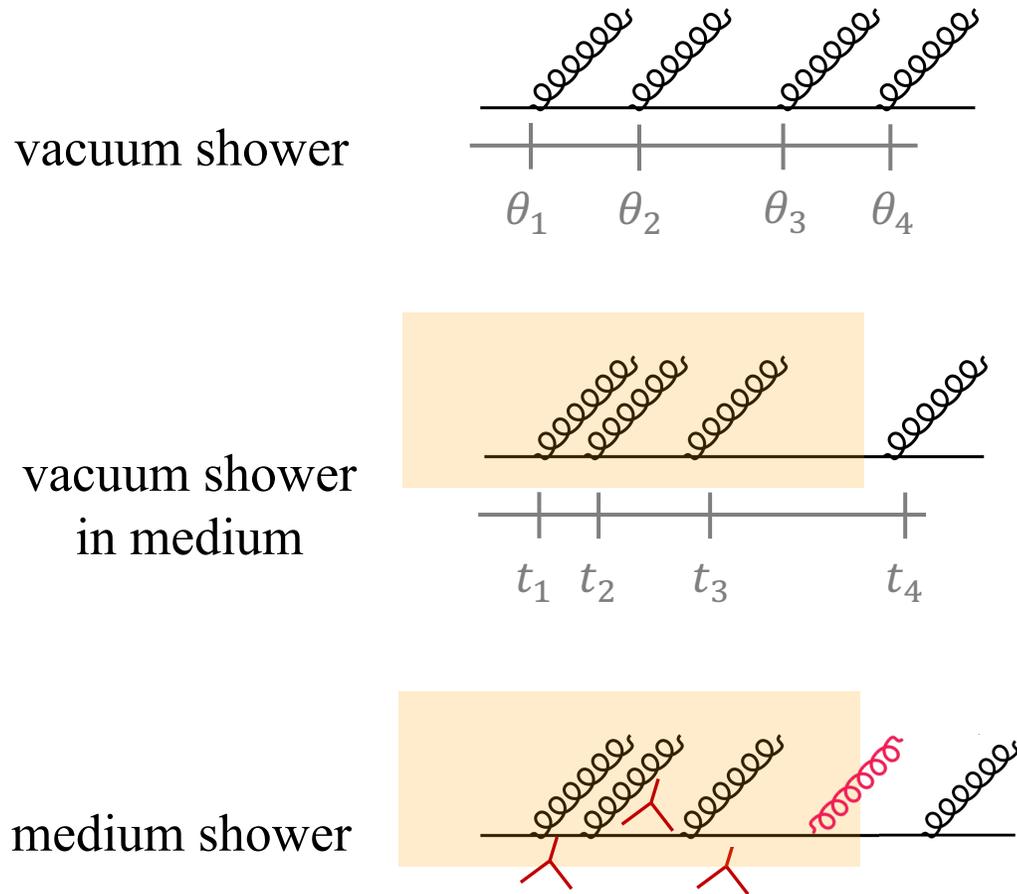

$$l_F \propto \sqrt{\omega}$$

Baier, Dokshitzer, Mueller, Peigne, Schiff (1996), Zakharov (1996)
Arnold, Moore, Yaffe (2003)

A high-energy parton fragments even in vacuum

Detailed interplay of vacuum physics and medium modification

Improved theory

- Improved parton radiation spectrum

Mehtar-Tani, Tywoniuk, Andres, Dominguez, Salgado, ...

- Parton showers in medium

Caucal, Iancu, Mueller, Soyez, Wiedemann, Zapp, ...

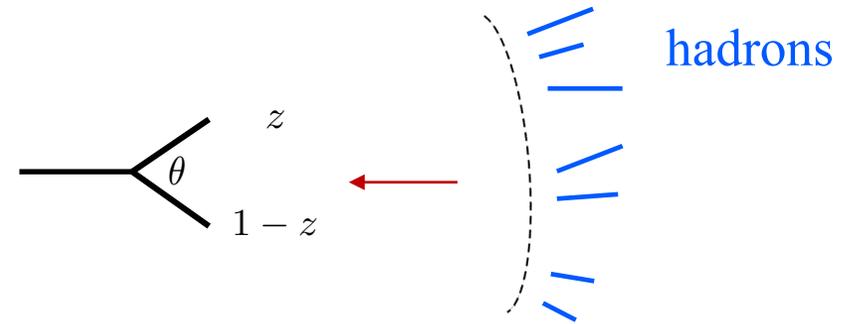

No current theories capture full complexity

Improved phenomenology

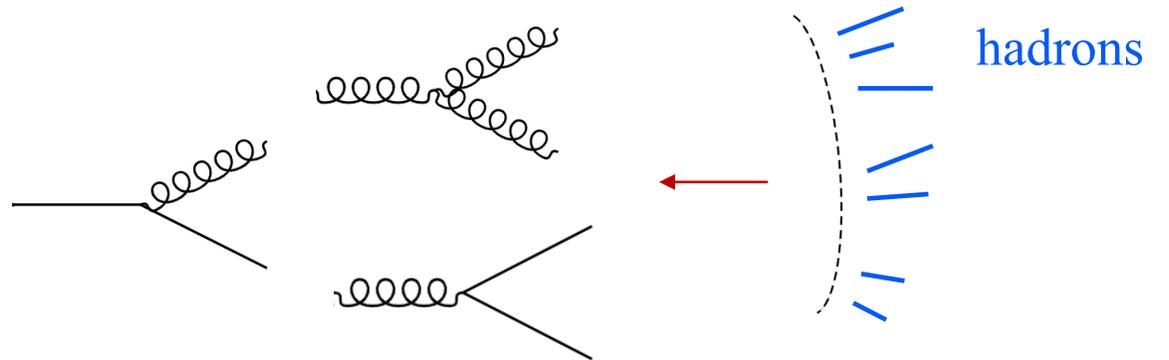

- Deconstructing a jet to access individual splittings

Building up a picture of a medium-modified jet from phenomenology

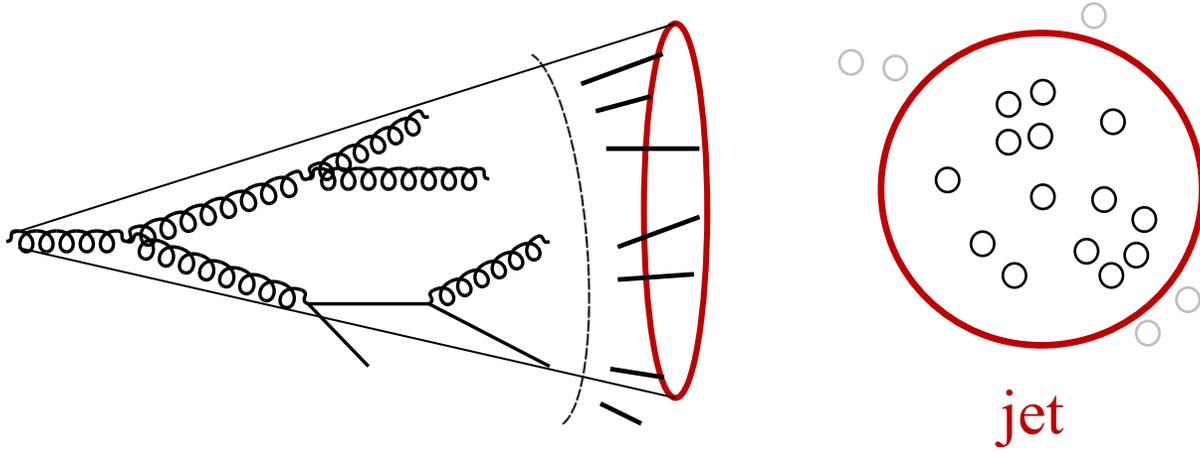

- **Hadrons to splittings**

- **Flavor-dependence of splittings**

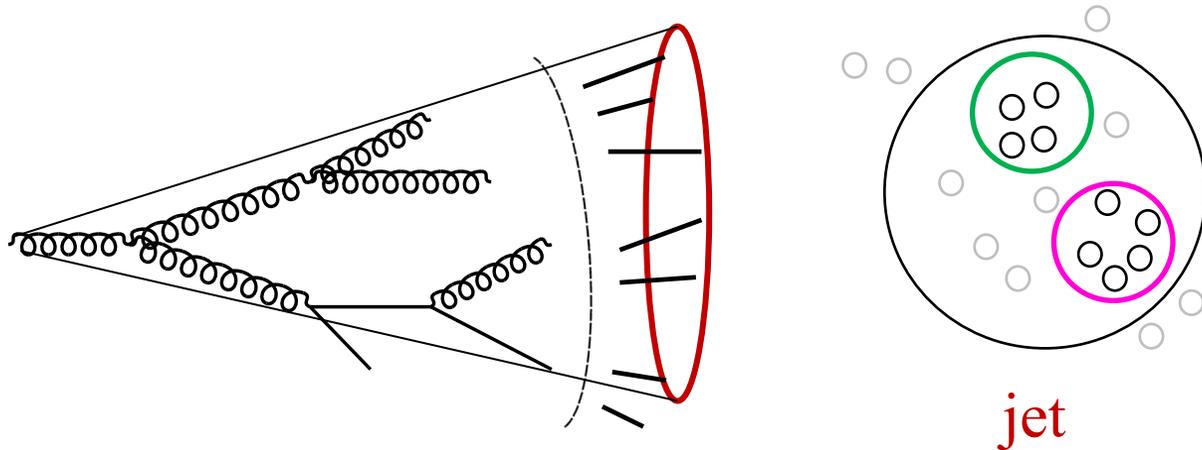

Accessing splitting functions from jet substructure

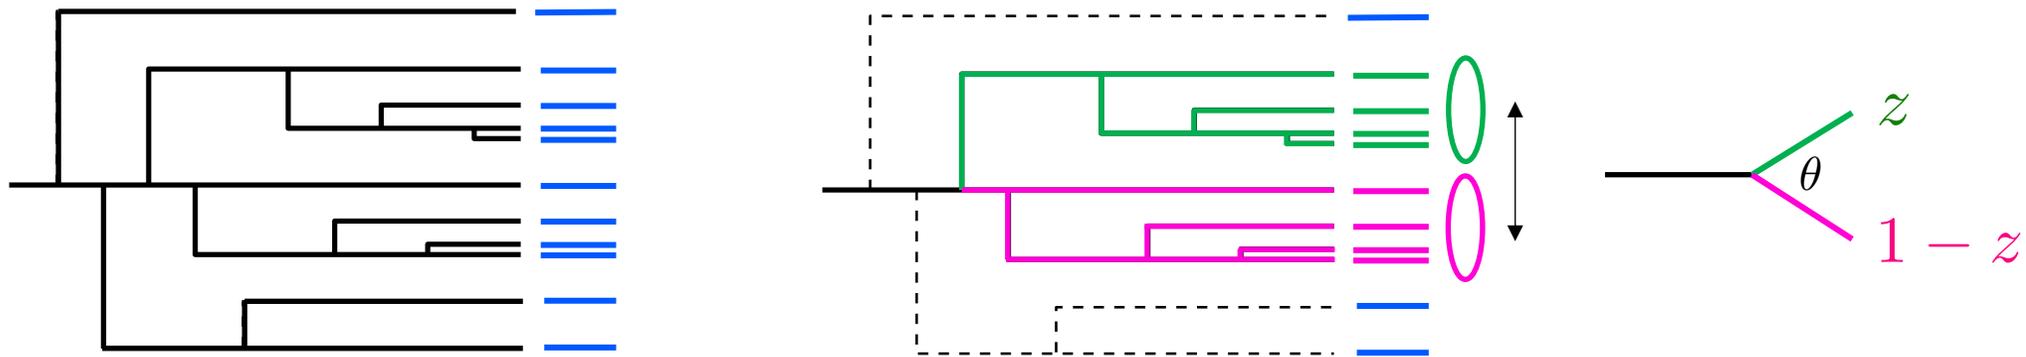

Access kinematics of gluon that initiated the shower (p_T, Q^2, \dots)

Accessing splitting functions from jet substructure

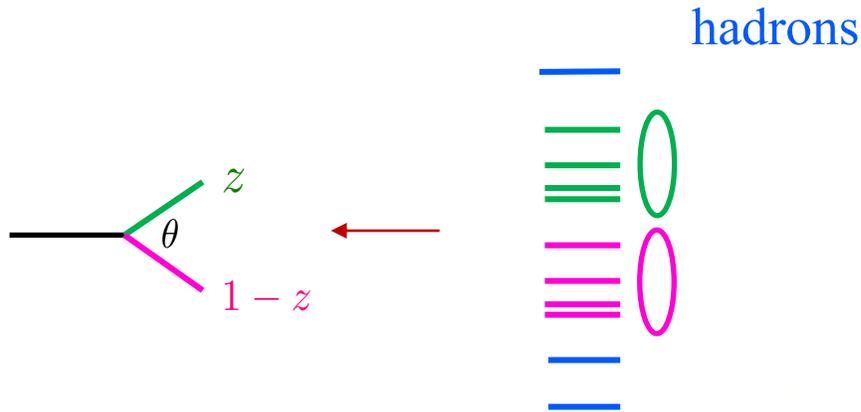

Access kinematics of gluon that initiated the shower (p_T, Q^2, \dots)

Use angular ordering of QCD to reconstruct emission history of shower from hadron level

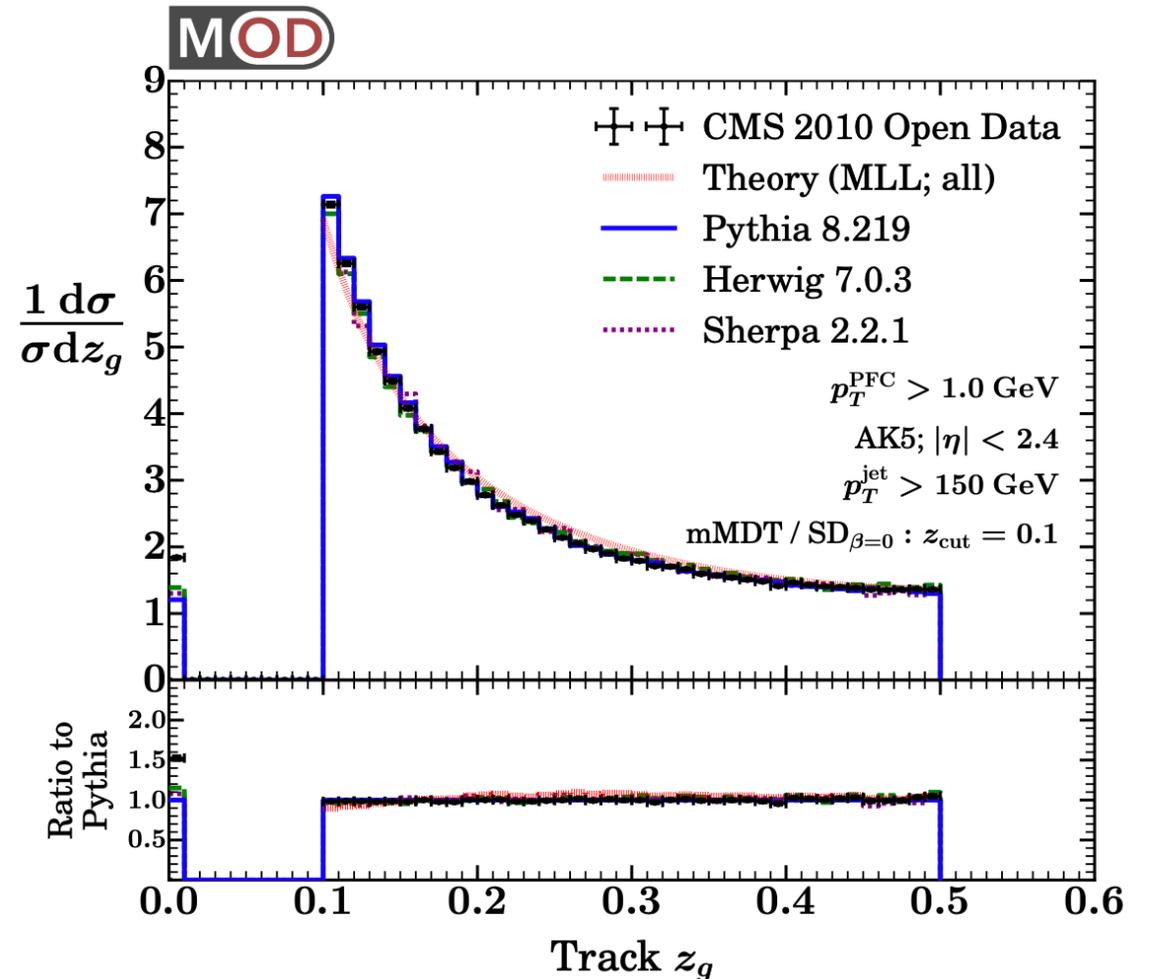

Accessing splitting functions from jet substructure

- Adapted for heavy ions: splittings with shortest formation time, highest k_t , ...

Mehtar-Tani, Soto-Ontoso, Tywoniuk [1911.00375];
 Caucal, Soto-Ontoso, Takacs [2111.14768]
 (see also Apolinario, Cordeiro, Zapp [2012.02199])

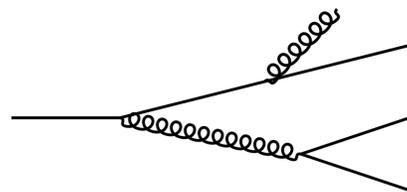

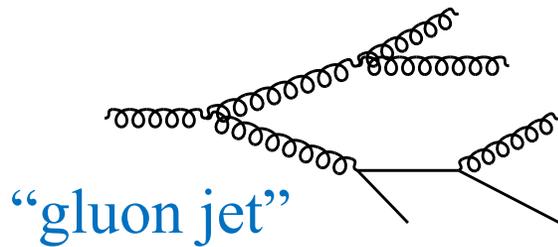

QCD splitting function from jets

Larkoski, Marzani, Thaler [1502.01719]
 Larkoski, Marzani, Thaler, Tripathy, Xue [1704.05066]

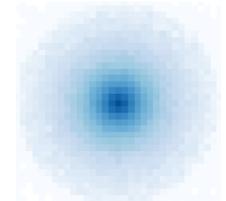

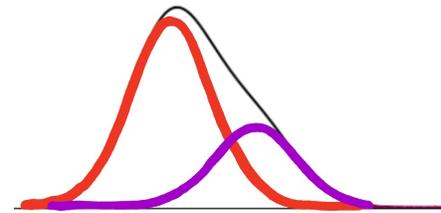

Accessing light flavor splitting functions

- In vacuum

Challenging to define beyond leading order

Banfi, Salam, Zanderighi [0601139]; Czakon, Mitov, Poncelet [2205.11879];
Caola, Grabarczyk, Hutt, Salam, Scyboz, Thaler [2306.07314]

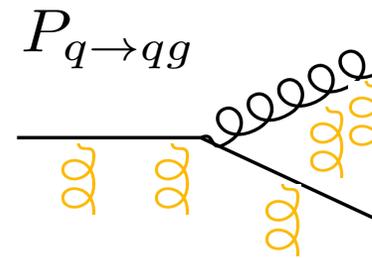

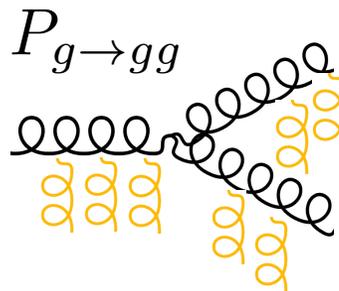

Observable-based, machine learning approaches

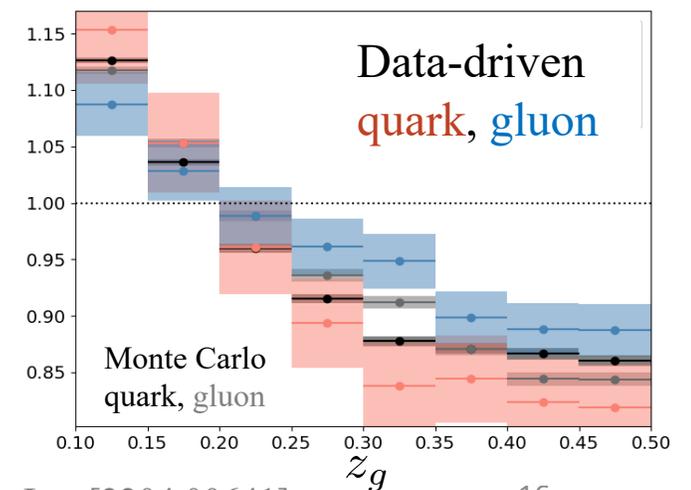

Thaler, Metodiev, Komiske, Schwartz, Dreyer, Soyez, Takacs, Larkoski, ...

- In medium

Flavor-dependent modification

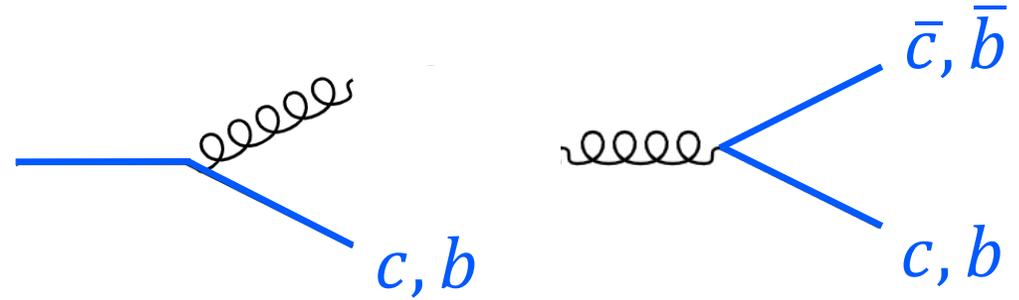

Modified q,g splitting functions

Accessing heavy flavor splitting functions

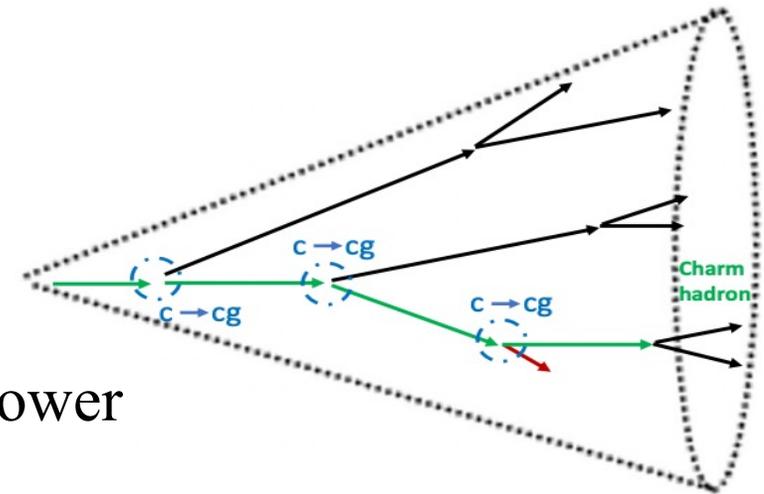

Heavy flavor splittings:

Advantages:

- Heavy flavor is preserved in the shower and not produced at hadronization
- Access later (more modified) splittings in the shower
- At high energies, access light flavor splittings

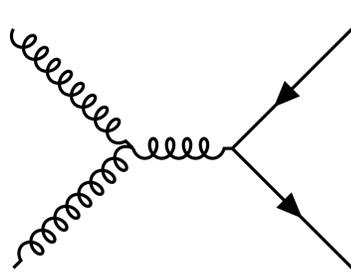

Used in ALICE [2106.05713]

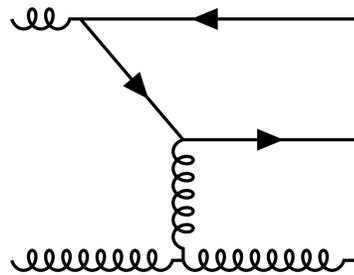

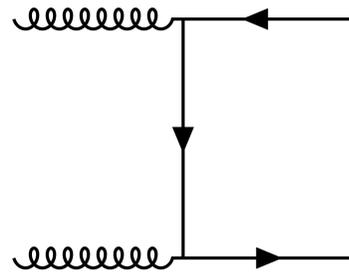

Focus of this talk: phenomenology of $g \rightarrow c\bar{c}$

Phenomenologically accessing the $g \rightarrow c\bar{c}$ splitting in jets

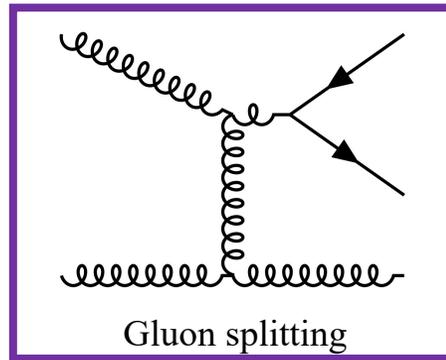

Leading processes for heavy quark production

Flavor creation

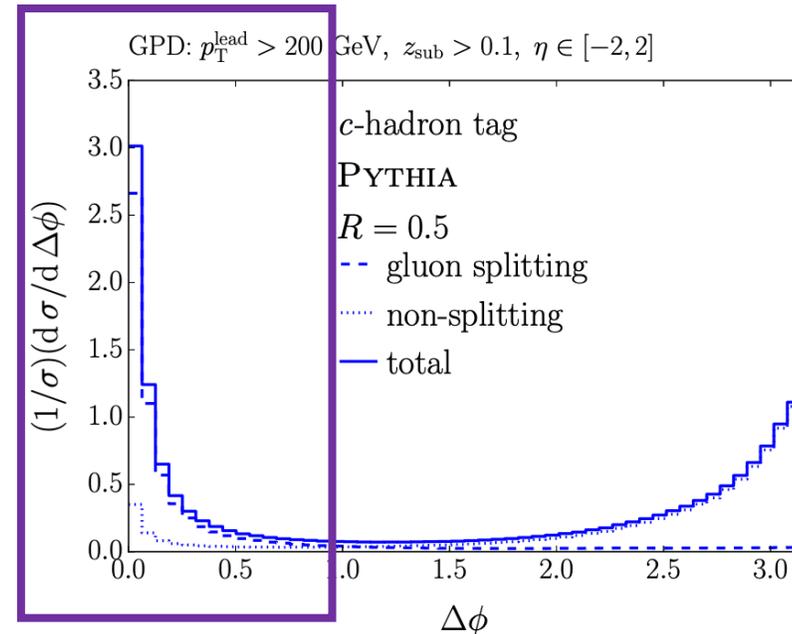

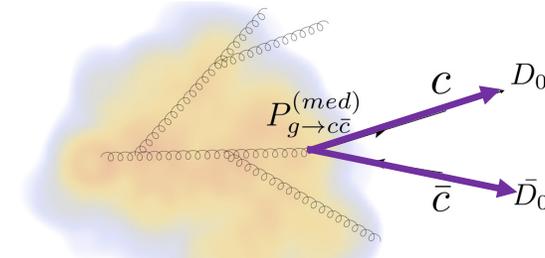

Flavor excitation

Gluon splitting

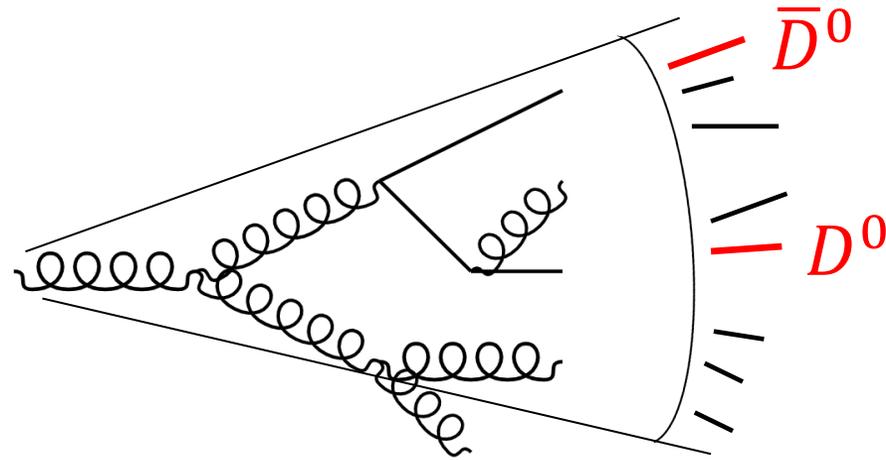

(approximately) collinear

Gluon splitting

Non-gluon-splitting

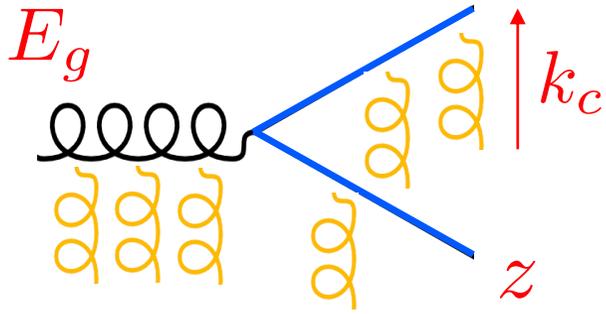

Phenomenologically accessing the $g \rightarrow c\bar{c}$ splitting in jets

Sample of showers including $g \rightarrow c\bar{c}$
splitting with high purity

Expected experimental sensitivity already in Run 3/4

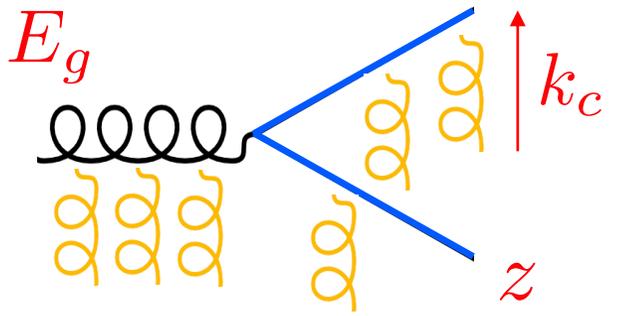

Modification of the $g \rightarrow c\bar{c}$ splitting function

$$P_{g \rightarrow c\bar{c}}(E_g, k_c^2, z) = P_{g \rightarrow c\bar{c}}^{\text{vac}}(k_c^2, z) + P_{g \rightarrow c\bar{c}}^{\text{med}}(E_g, k_c^2, z)$$

Resum arbitrarily-many soft gluon interactions with a medium of length L

Modification of the $g \rightarrow c\bar{c}$ splitting function

$$P_{g \rightarrow c\bar{c}}(E_g, k_c^2, z) = P_{g \rightarrow c\bar{c}}^{\text{vac}}(k_c^2, z) + P_{g \rightarrow c\bar{c}}^{\text{med}}(E_g, k_c^2, z)$$

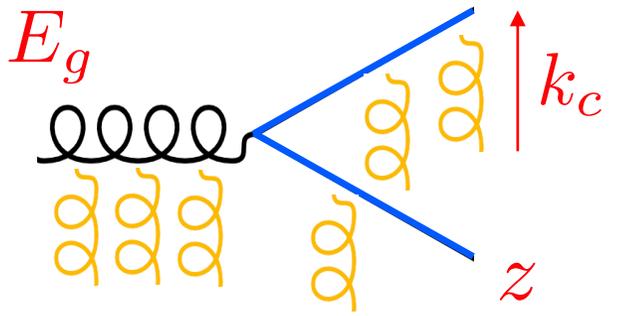

Resum arbitrarily-many soft gluon interactions with a medium of length L

Results of the calculation:

- Depletion at small k_c^2

broadening

Modification of the $g \rightarrow c\bar{c}$ splitting function

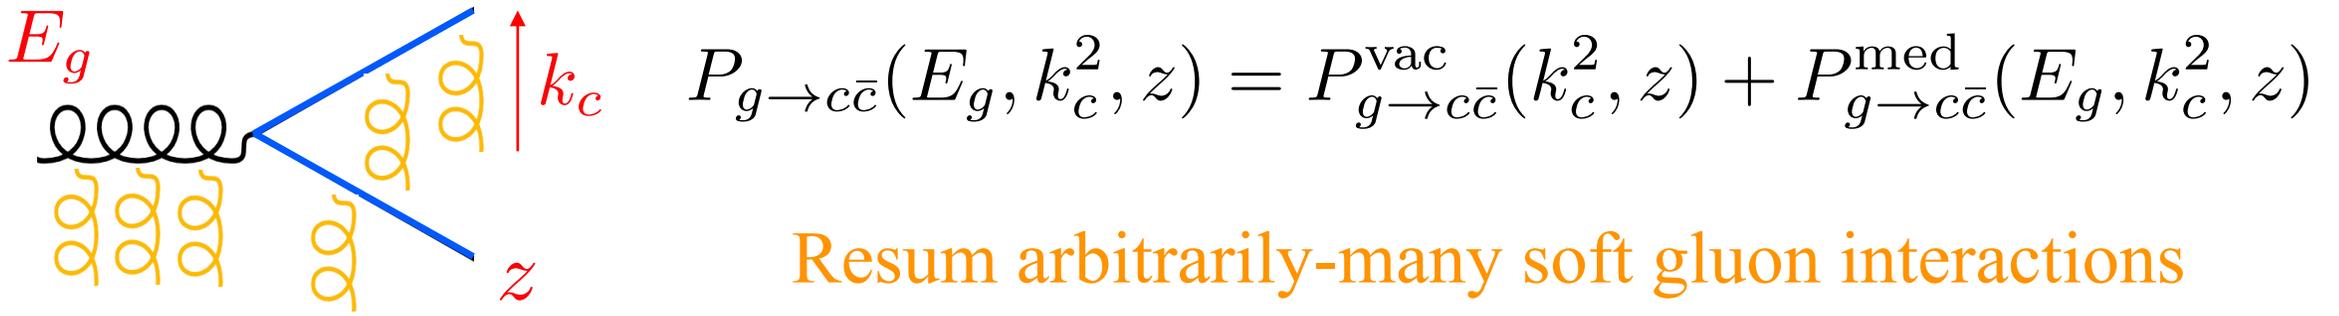

$$P_{g \rightarrow c\bar{c}}(E_g, k_c^2, z) = P_{g \rightarrow c\bar{c}}^{\text{vac}}(k_c^2, z) + P_{g \rightarrow c\bar{c}}^{\text{med}}(E_g, k_c^2, z)$$

Resum arbitrarily-many soft gluon interactions with a medium of length L

Results of the calculation:

- Depletion at small k_c^2 broadening
- Less modification with increasing E_g formation-time dependence

Modification of the $g \rightarrow c\bar{c}$ splitting function

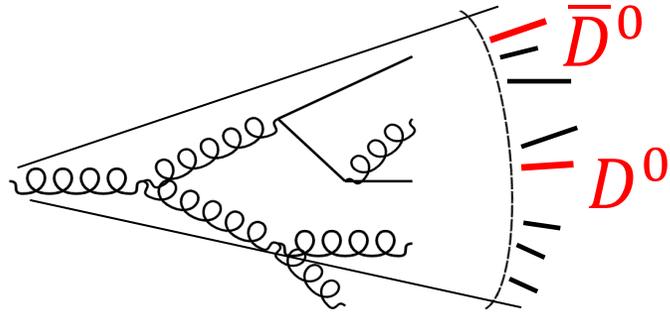

$$P_{g \rightarrow c\bar{c}}(E_g, k_c^2, z) = P_{g \rightarrow c\bar{c}}^{\text{vac}}(k_c^2, z) + P_{g \rightarrow c\bar{c}}^{\text{med}}(E_g, k_c^2, z)$$

Resum arbitrarily-many soft gluon interactions with a medium of length L

Results of the calculation:

- Depletion at small k_c^2 broadening
- Less modification with increasing E_g formation-time dependence
- Medium-enhanced rate of $c\bar{c}$ production! gluons promoted above threshold

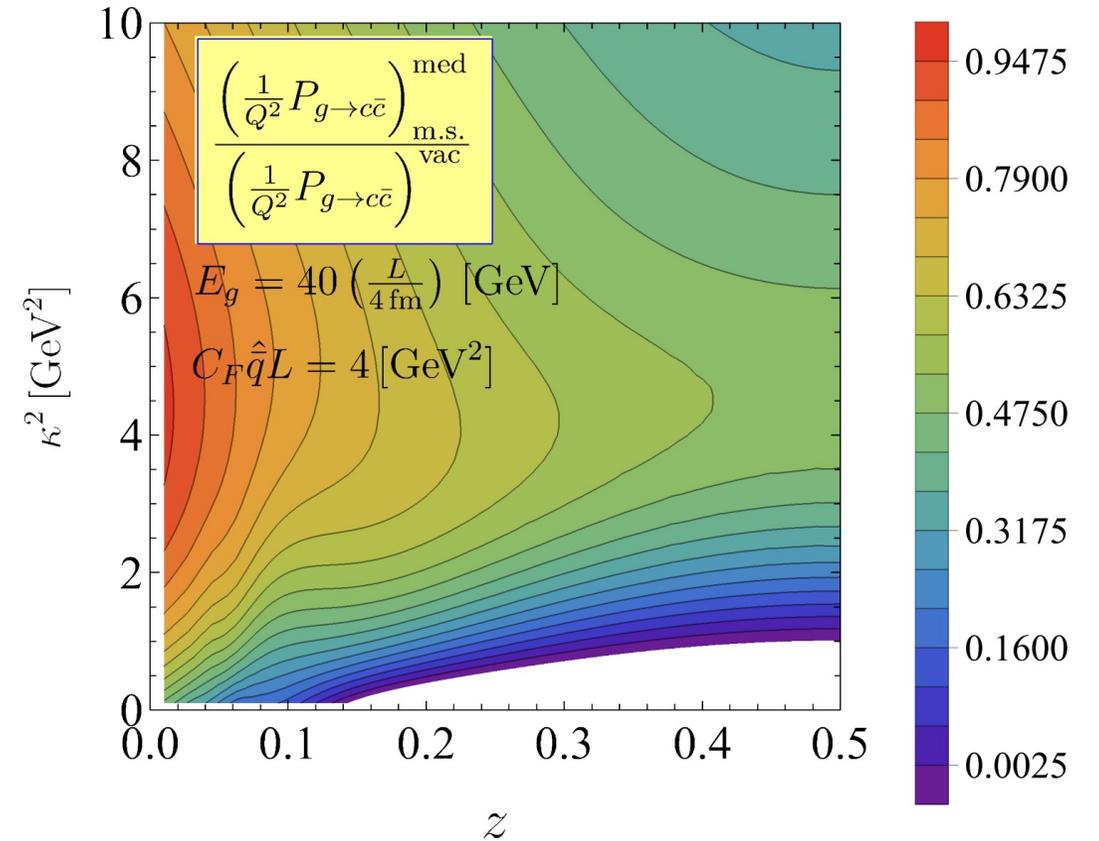

Observing $g \rightarrow c\bar{c}$ enhancement in jets

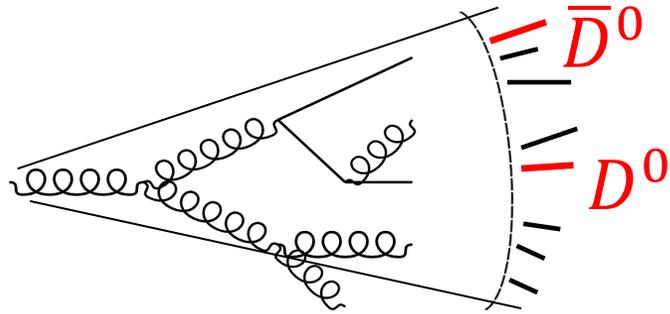

Get kinematics of $g \rightarrow c\bar{c}$

Reweight each splitting by

$$w_{g \rightarrow c\bar{c}}^{med}(E_g, k_c^2, z) = 1 + \frac{\left(\frac{1}{Q^2} P_{g \rightarrow c\bar{c}}\right)^{med}(E_g, k_c^2, z)}{\left(\frac{1}{Q^2} P_{g \rightarrow c\bar{c}}\right)^{vac}(k_c^2, z)}$$

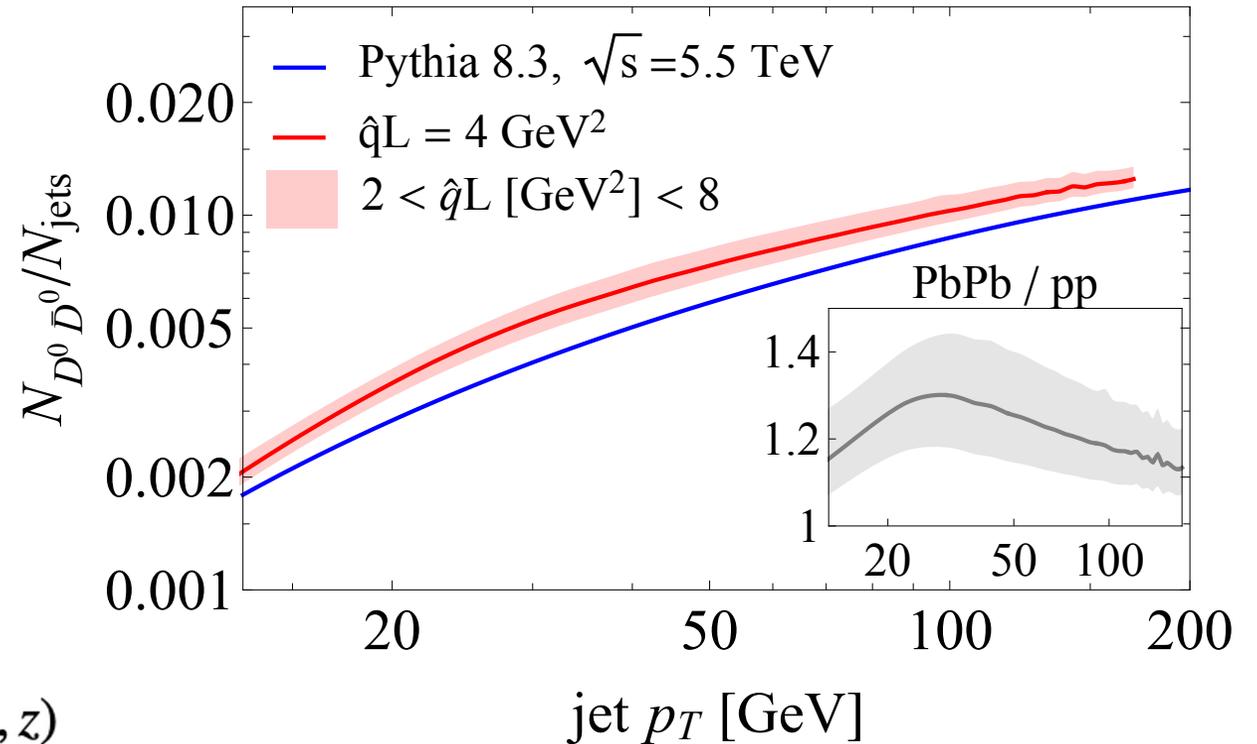

Observing $g \rightarrow c\bar{c}$ enhancement in jets

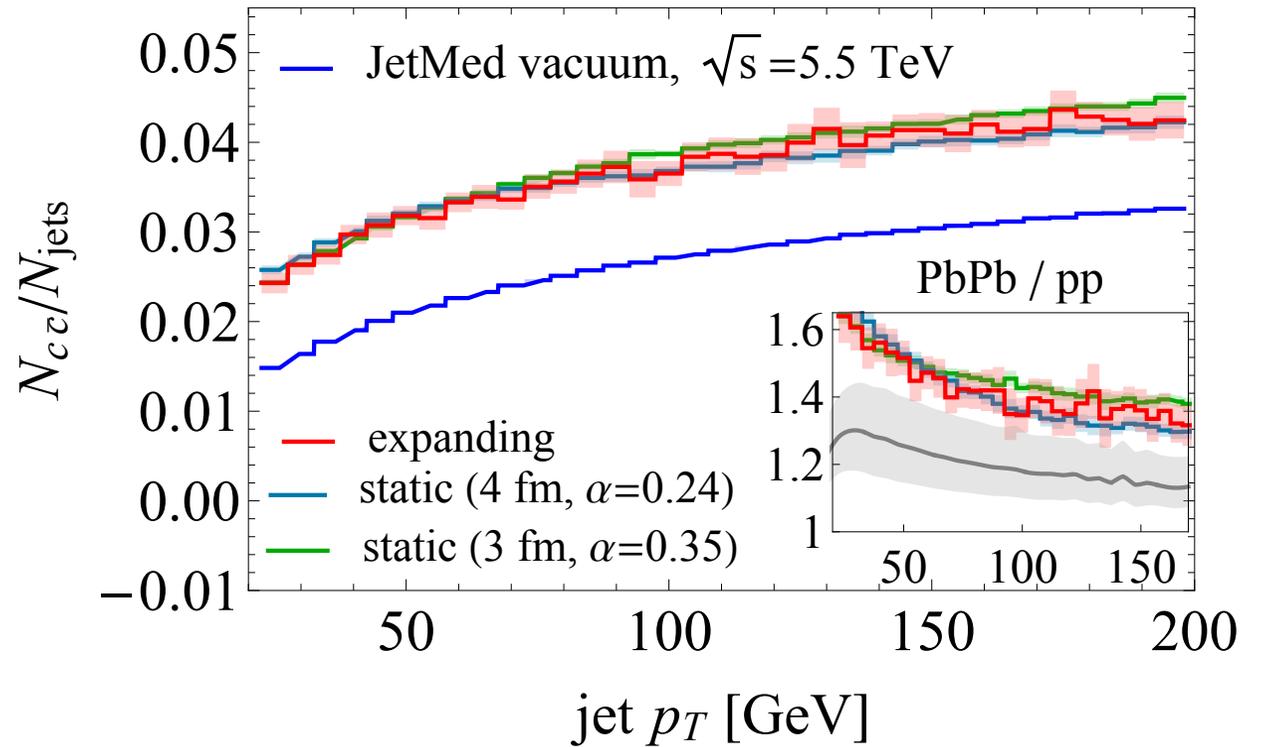

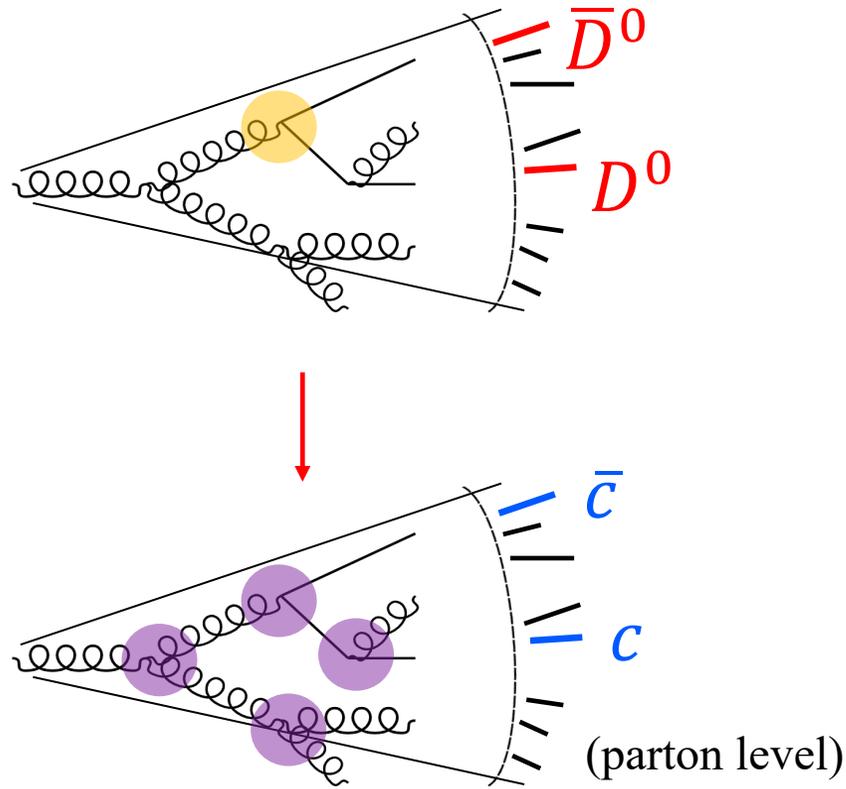

Get kinematics of $g \rightarrow c\bar{c}$

Reweight each splitting by

$$w_{g \rightarrow c\bar{c}}^{med}(E_g, k_c^2, z) = 1 + \frac{\left(\frac{1}{Q^2} P_{g \rightarrow c\bar{c}}\right)^{med}(E_g, k_c^2, z)}{\left(\frac{1}{Q^2} P_{g \rightarrow c\bar{c}}\right)^{vac}(k_c^2, z)}$$

$g \rightarrow c\bar{c}$ enhancement in state-of-the-art Monte Carlo simulations

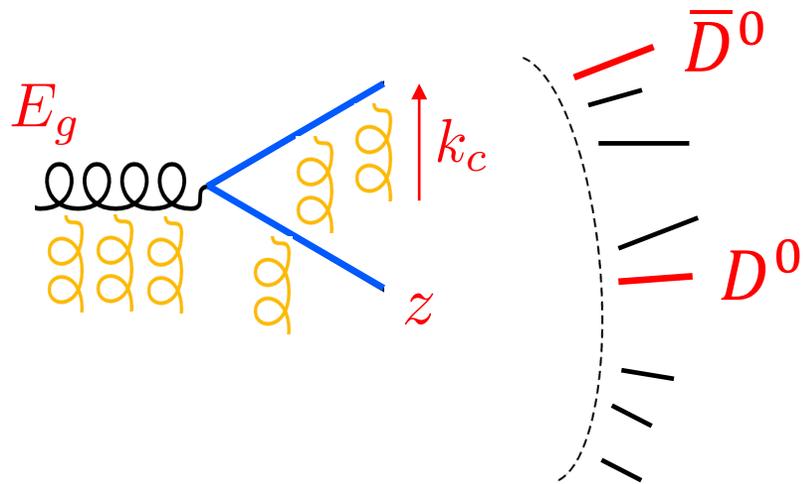

w/ Gregory Soyez

Jet quenching in JetMed: factorization of vacuum-like and medium-induced emissions

Caucal, Iancu, Soyez
[1907.04866]

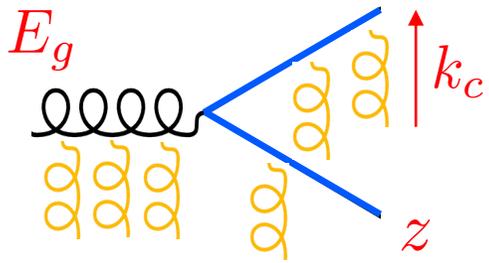

Beyond enhancement: unique phenomenology of $g \rightarrow c\bar{c}$ splittings

A uniquely clean phenomenological signature of medium modification

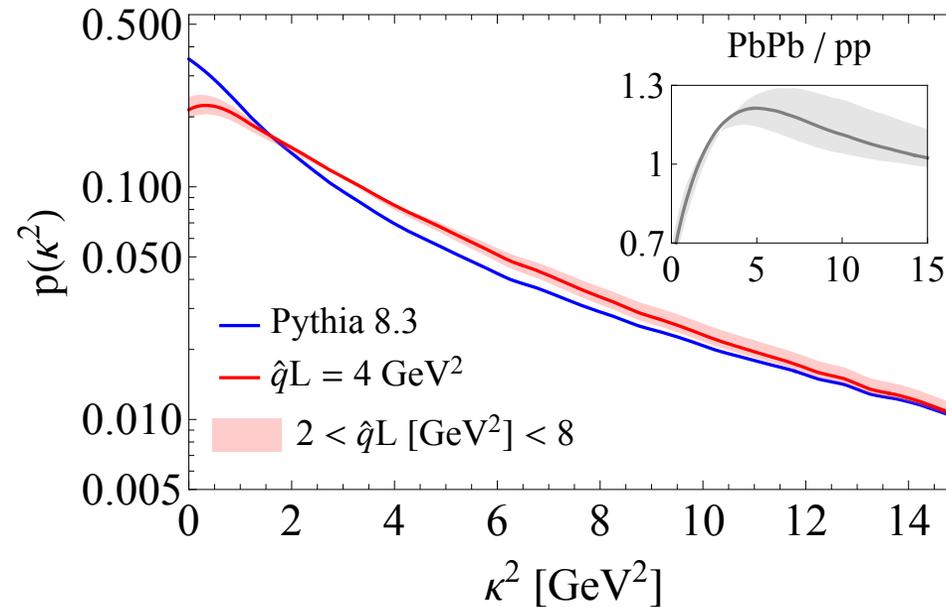

- Isolate individual type of splitting (not quark and gluon mixture) at any stage of the shower
- Splitting can be identified at hadron level from D and \bar{D} in reclustering history
- Splitting kinematics from reclustering history

Beyond enhancement: unique phenomenology of $g \rightarrow c\bar{c}$ splittings

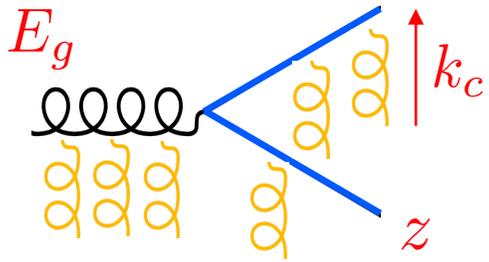

- **Broadening:** momentum broadening of $c\bar{c}$ pair

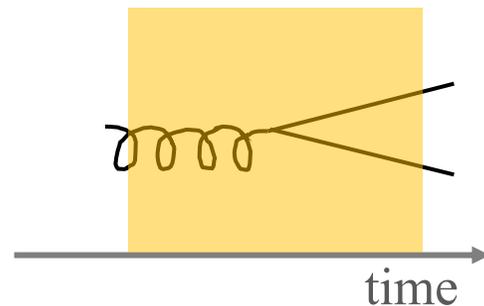

Can use jet substructure to access broadening at hadron-level

Beyond enhancement: unique phenomenology of $g \rightarrow c\bar{c}$ splittings

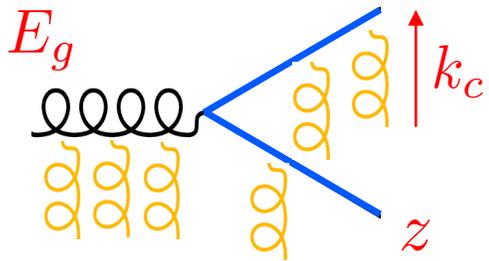

- Formation time dependence of broadening

Gluons have a “lifetime” $\tau_f \sim \frac{2E_g}{Q^2}$ depending on their energy

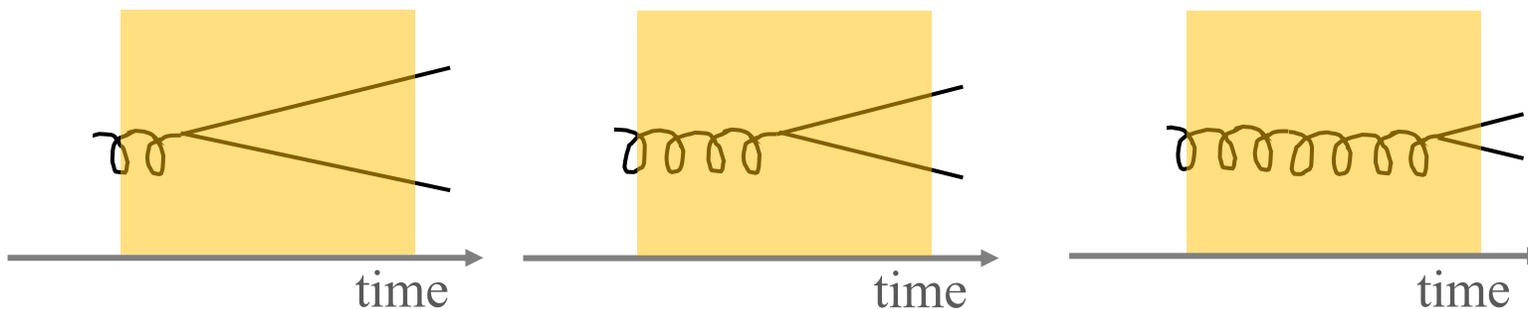

Beyond enhancement: unique phenomenology of $g \rightarrow c\bar{c}$ splittings

- Formation time dependence of broadening

Gluons have a “lifetime” $\tau_f \sim \frac{2E_g}{Q^2}$ depending on their energy

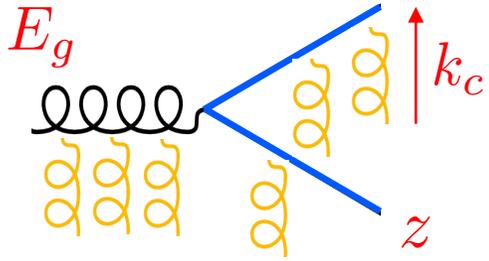

- Access modification of $c\bar{c}$ pair at later times in the QGP

$\sim 1 - 6$ fm delay for
20 – 100 GeV gluons

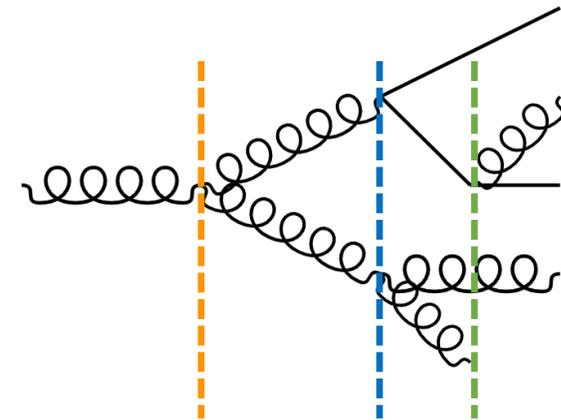

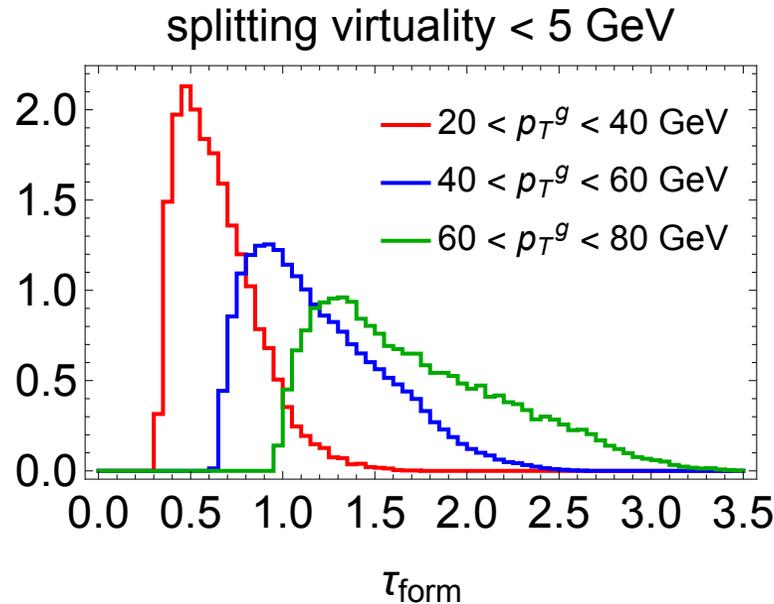

Increasing gluon energy

Beyond enhancement: unique phenomenology of $g \rightarrow c\bar{c}$ splittings

- **Formation time dependence** of broadening

Near mass threshold $Q^2 \sim m_c^2$, formation time grows with energy $\tau_f \sim \frac{2E_g}{Q^2}$

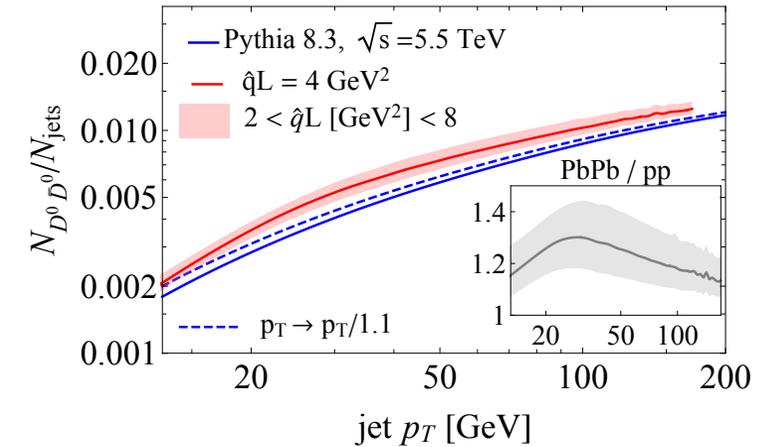

Level 0 1 2 ...

A process with many exciting future avenues!

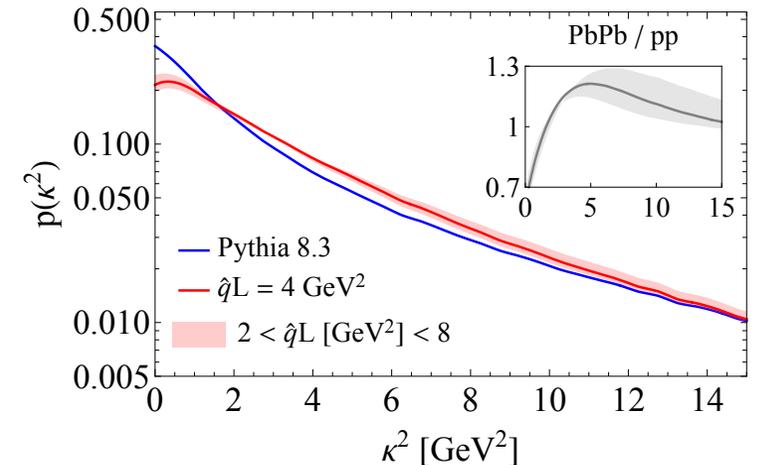

So far..

- Medium-enhanced rate of $c\bar{c}$ production

Outlook

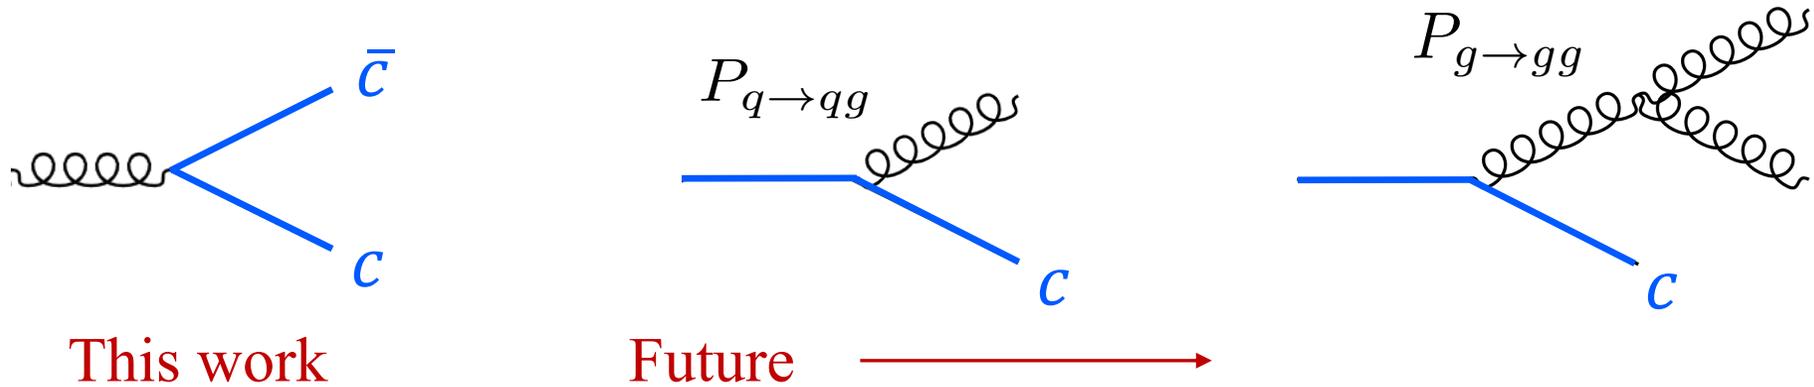

- Broadening of $c\bar{c}$ pair from hadron level
- Formation time dependence of modification

Clean process with a lot of exciting physics opportunities!

Outlook

Phenomenology of heavy-flavor tagged jets

Constructing a picture of modified jets from phenomenology
